

# Application Interface

Clicking on an object will open a page with several menus, quick access links, viewer, properties and relations. The page is divided into the following sections:

1. **Application Header** - Shows overall LAPIS header with search, main menus, activities, messages, emails, calendar, notifications, language, and user info
2. **Search Bar** - Visible when toggled by the search button in Application Header or when search results are displayed
3. **Object Header** - Contains breadcrumb, object title, optional version information, object type, object menu, optional object quick actions buttons
4. **Object View** - Displays the current object with the view for its type
5. **Application Resizable Left Side Bar** - Shows default and custom application widgets
6. **Optional Dockable Resizable Right Side Bar** - Drag-drop any object or widget to the right of the screen to show it in the right side bar
7. **Dock-able Widgets Bar** - Drag-drop any object or widget to the bottom right of the screen for quick access (here are shown minimized objects and widgets)
8. **Application Footer** - General information about the licenses and quick access to Help
