

# Create Asset

If you want to have a media asset containing multiple contents associated with it such as additional audios, subtitles, texts, multiple video resolutions or other media transformations, you have to create a video asset and add contents to it. You can do that by:

- Click “Make Asset” button on top of your media to create an asset as shown here:

The screenshot displays a video player interface. At the top, the video title is "What's new in SubtitleNEXT v. 5.11 workshop (1).mp4 (video/mp4)". Below the title, there are three buttons: "Create Subtitle Suite" (purple), "Make Asset" (green, highlighted), and "Transcribe with Microsoft" (grey). The video player shows a black screen with the SubtitleNEXT logo and text: "on will start shortly..." and "The sessi". The right sidebar shows file details: "File Record", "What's new in SubtitleNEXT v. 5.11 works...", "107.43 MB", "video/mp4", and "Transformations" with "No results".

- Use the “Add Content” Action as shown here:
