Contact Type shows if the Individual is Affiliate, (the one that is the owner of the system) or External, which is then defined further by Relationship Role - Client, Supplier, Partner or a

combination of those.

Note: Please, have in mind Relationship Roles will appear, once the Contact Type is set to External, and Safe Draft button at the bottom of the screen is pressed.

Managing Marketing Activities

As seen on the above sections, there are multiple parameters you can associate with the contacts. A part from the widely used and standard ones like Name, email(s), phone(s), address(es), social media accounts (Twitter, Facebook, LinkedIn, Skype, etc.), you can also set Company Positions, Departments, Hierarchical Managers and Skills (those are specific skill sets used in company specific business niche and required from internal and external human resources. In the contacts, you can also input data which to be used for the sales, marketing and financial operations with this contact. Such properties are:

- Sales parameters:
 - Relationship role – client, partner, supplier
 - If the contact is with a client relationship role, then you can set its sales status – lead, prospect, customer

This way you can differentiate between marketing leads, potential clients (prospects) and existing clients (customers).

- For marketing purposes and to comply with the GDPR and other data protection regulations you can track the e-mail marketing activities for which your clients have subscribed/unsubscribed. The default activities are:
 - Newsletters
 - Promotions
 - Product Announcements
 - Email Marketing

Marketing activities for each contact can be set or edit via Actions - Edit (Advanced Edit Mode) under Marketing Activities property

Marketing Activities	Marketing Activity	Status
	Add New Marketing Activity	Restricted Hash

Adding new activities can be done by pressing Add New Marketing Activity and selecting options
