

# Downloading

If you want to download a file or an asset with all its contents you can use the Download operation from the local menu of the file/asset as shown here:

The screenshot shows a video player interface for a file named "BNT Subtitling Project.mp4 (video/mp4) v.1" (StreamableContent-Video). The video content displays a news segment with a table of statistics. The table has four columns: "Потребители", "Нови потребители", "Сесии", and "Посещения на сайта". The rows represent months: "Април", "Юли", and "Ноември".

	Потребители	Нови потребители	Сесии	Посещения на сайта
Април	159 933	95 723	210 552	414 800
Юли	304 755	176 311	378 475	654 293
Ноември	337 660	187 060	410 785	690 9

Below the table, there is a news ticker with the text: "Още от ДЕНЯ ГОДИНАТА НА БНТ ПРЕДИЗВИКАТЕЛСТВАТА ПРЕД ОБЩЕСТВЕНАТА ТЕЛЕВИЗИЯ".

On the right side, a context menu is open, showing options: "Change Property", "Edit", "Copy", "Create File Record", "Create New Version", "Download" (highlighted), "Open in SubtitleNEXT", "Open in SyncMaster", "Transfer", "Update Content", and "Extract Metadata".

If you want to download multiple files or assets with their contents, you can do that by:

1. Selecting multiple files/assets by clicking the check box in front of them
2. Going to Selection Actions →Download

								Selection Actions	
								X Clear Selection	
								Change Property	
								Download	
								Open in SubtitleNEXT	
								Extract Metadata	
								Export to CSV	
								Export to Excel	
								Export to JSON	
								Render as
