Export for Video Editing software

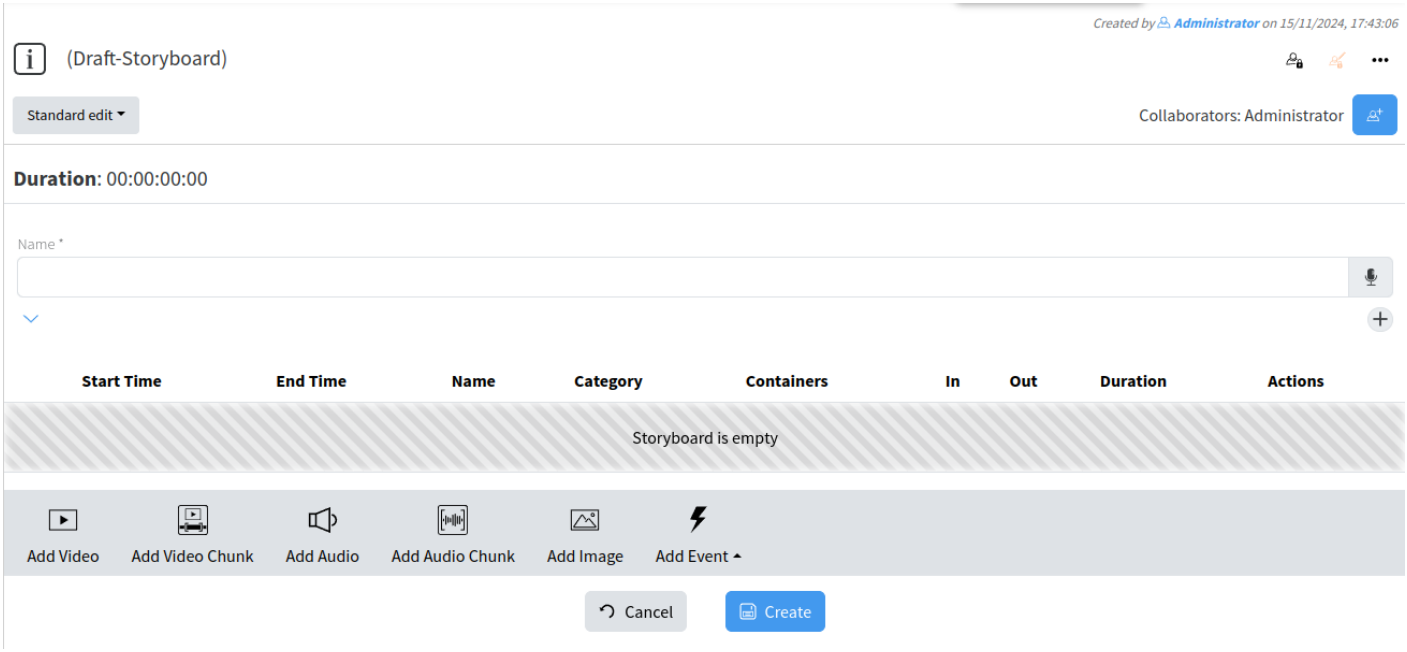

Export for Video Editing software like Adobe Premiere, LightWorks, Final Cut Pro, etc.

Create a Storyboard by following the steps:

Create new → Other → Storyboard

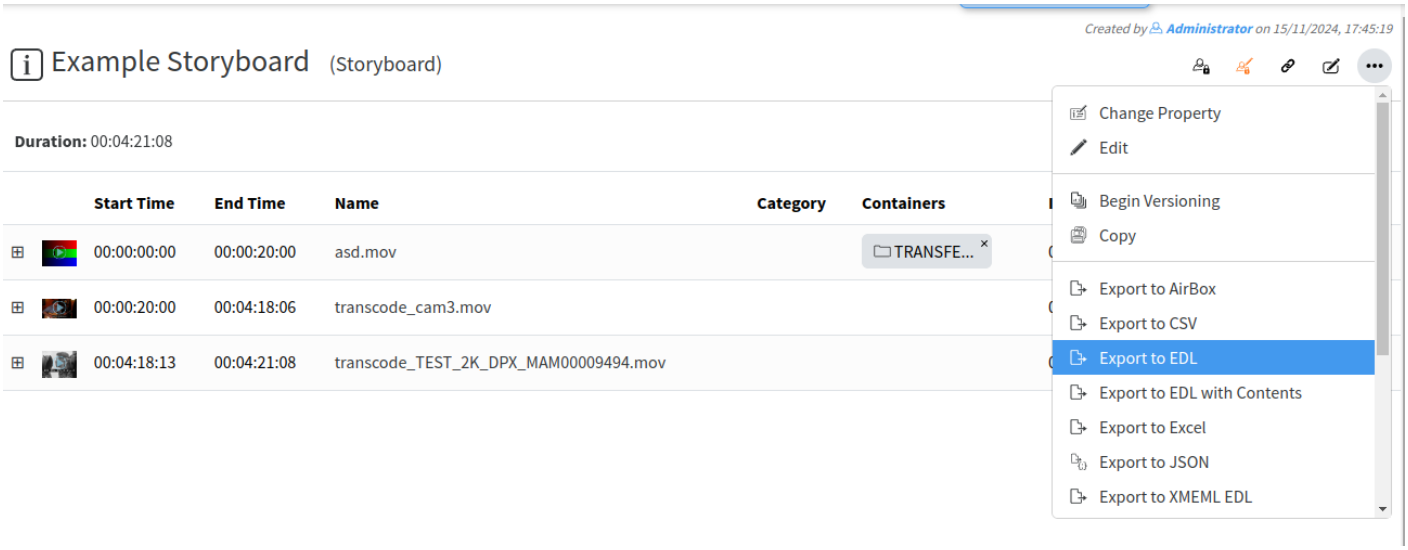

Define attributes for the storyboard

Add media assets into storyboard then from the object's menu select **Export to EDL** or **Export to XMEDL EDL**, or

Export to EDL with Contents or **Export to XMEDL EDL with Contents**. Second choices will download automatically stored content at the storyboard to the local PC where EDL is saved. Simply, second choice will download EDL file with its corresponding media content.

Open Adobe Premiere or other NLE software and load the EDL or the XML file.
